

Wall telephone B 122plus

The comfortable wall telephone

In heavily frequented workspaces, the best place for a telephone is the wall.

Of course, not just any telephone but the wall telephone B 122plus. Because its compact, closed body fits the size and design of every ambience and every wall.

With only 2 screws and without opening the housing, you can mount the telephone in any location at which you need to make a call but at which a desk telephone would be impractical.
