- Robust and weatherproof structure
- Battery operated and thus autonomous, expensive installation and maintenance work are not required
- Very easy installation with various fastening options
- Hardly any maintenance or service

**Many advantages at an attractive price**

If there is an emergency while bathing in summer - a bathing accident, a cardiac arrest - quick help is required. Make an emergency call, but how without a cell phone? Often the cell phone is left in the car or at home for fear of theft.

Emergency telephones can be lifesavers in outdoor pools, on rivers and lakes. Even in winter, when skaters are out and about on the frozen lake and there is a risk of ice breaking, the pillars are also important helpers.

The police, fire brigade and ambulance move out several million times each year to rescue people. In an emergency or threatening situation, those affected must be able to make an emergency call easily, safely and reliably so that the rescuers can act quickly.

The most important task of the emergency call column is that anyone can trigger an emergency call at any time and without complications - even without their own mobile phone and without knowing the exact location, because when using the HVI-TEC emergency call column, information about the exact location of the emergency call point becomes automatically transmitted to the recipient of the emergency call.

Although the locations of the emergency call devices are very different and each use has specific requirements, the following always applies: in an emergency, every second counts!

The use of HVI-TEC swimming pool radio emergency telephones enables reliable alarming in the event of an alarm. The emergency telephones are characterized by their ease of use and resistance to vandalism. Equipped with large red mushroom buttons, they enable an emergency call to be triggered quickly and easily. Misuse can be prevented by using the “direct call button behind glass” variant. In an emergency, the glass can be pressed in slightly and the emergency call can be triggered by pressing the button. The integration of numerous additional features enables the individual combination of functions, such as the automatic playback of voice announcements after triggering the emergency call. The emergency call can also be displayed on the lifeguard's hand-held radio transmitter so that he can quickly initiate help.

#### HVI-TEC radio emergency telephones

If required, HVI-TEC radio emergency telephones can also be integrated into the existing telephone or data network and increase security both in public areas and in operation. In addition, lettering can be engraved and pillars can be powder-coated in RAL colors. Choose from the numerous designs, materials and technical equipment the perfect emergency telephones for your location!
